## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 9/17/2007 has been entered.

### ***Information Disclosure Statement***

2. An initialed and dated copy of Applicant's IDS form 1449, filed 9/17/2007, is attached to the instant Office action.

## **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance:

The prior art of record, Peng (US Patent 6,928,467) and LaRue et al. (US Publication 2002/0133508), teach analogous art to the instant application, that of synchronizing datasets between different objects in databases. Peng more specifically teaches version management between objects using status messages passed between objects. However, after careful consideration of the IDS filed 9/17/2007, the Brief (pages

12-15) filed 7/2/2007 and the personal interview conducted 6/19/2007, the applicant extensively and specifically pointed out how the claim amendments overcome the prior art of record, particularly the version vector of Peng used to synchronize data is different from the vector of the instant application in that the vector of Peng is identified by time, and not in terms of changes made to an object, meaning multiple past changes can be sent and utilized by the replica objects using a single request changes message of the instant application, providing granularity to synchronizing objects, as opposed to Peng's invention of dealing with a previous change one at a time. Thus, in the instant application, a change message sent to a second replica can contain multiple changes and only those specific changes that are needed to synchronize replicas.

This feature is indicated in independent claims 9, 29, and 33, wherein knowledge of at least two or more changes is included in a vector, the vector representing a plurality of change IDs, wherein each vector includes at least one replica ID identifying a replica associated with the plurality of changes, and at least one magnitude representing the number of changes in the plurality of changes. Consequently, the claims as amended are allowable over prior art.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
